- The random number generation method will be used to select the Gradient airdrop recipients.

- Specifically, the selection process is organized as follows:

  - It applies equally to every token in a collection

  - Each piece has an equal chance of being selected.

  - In other words, there is no need to segregate tokens across various addresses to increase your chance of success if you own multiple tokens in a collection

  - The mechanics of the process are publicly auditable and as described in the randomization process

Not without one of these!

As long as I'm in charge of this household, we never take any chances. Thinking of seizing the memes of production without a hardware wallet? Think again!

BECAUSE your digital assets are valuable and important to you.

BECAUSE keeping your private keys away from bad players, can prevent disaster.

BECAUSE a hardware wallet offers the highest level of security.

BECAUSE you should be smart about safety in the open metaverse.

Use a hardware wallet!
