Step 2: Source of Entropy

___

- The block hash of block 17590569 will be used as the source of entropy for the pseudo-random number generator (PRNG) used to sample addresses

- Input snapshot will be posted, along with the sampling source code, for public verification of input and outputs on the 6529 Collections Github account

1 – 10% of all 6529 Collections are reserved for future usage to be determined.

Step 4: Partial Airdrops

- There will be no partial airdrops for this drop

- The random number generation method will be used to select Botto allowlist recipients in phase 2.

- Specifically, the selection process is organized as follows:

  - It applies equally to every token in a collection

  - Each piece has an equal chance of being selected.

  - In other words, there is no need to segregate tokens across various addresses to increase your chance of success if you own multiple tokens in a collection

  - The mechanics of the process are publicly auditable and as described in the randomization process

- If you are using a cold wallet you can mint from a different ETH address by using **https://seize.io/delegation/delegation-center** to register and manage your delegated and sub-delegated wallets.
