Step 4: Partial Airdrops (30 out of 300)

- 6529 Gradient <u>HODLers</u>:   10 (out of 101 tokens)

- 6529 Meme Card <u>HODLers</u>:   20 (out of 3,000 tokens)

- The random number generation method will be used to select the airdrop recipients

- Specifically, the selection process is organized as follows:
  - It applies equally to every token in a collection
  - Each piece has an equal chance of being selected.
  - In other words, there is no need to segregate tokens across various addresses to increase your chance of success if you own multiple tokens in a collection
  - The mechanics of the process are publicly auditable and as described in the randomization process

  0x8cd40fe6B8C6e663096668cB6FE47687593f7d99

  https://opensea.io/thememesdistributor

- We will manually confirm that the transactions match the allowlist and transfer your card

- If you are using a cold wallet and we can manually verify it is yours, you can send from a different ETH address but please contact @darrensrs in advance **before doing this**.

- **Do not send ETH** if you are not on the allowlist – it will not get you a card

- For future meme cards, once we have enabled 1155 lazy minting on the manifold contract, we will probably switch to trust free minting

- In the meantime though, it is OK – allowlists and payments are both publicly verifiable
